## IT in today's workplace

The way organisations manage their IT assets has become more complex. Devices are no longer confined to a single location – they move across offices, homes, and multiple sites, making control, security, and visibility harder to maintain.

More than two-thirds (67%) of IT leaders report lacking complete visibility across all work devices in their organisation.\*

Restore Technology simplifies the process.

We provide a fully managed, end-to-end IT lifecycle service that supports you at every stage of the IT lifecycle – from deployment through to end of useful life. We act as an extension of your team, taking care of the day-to-day management of your IT estate, allowing your in-house team to stay focused on business priorities.

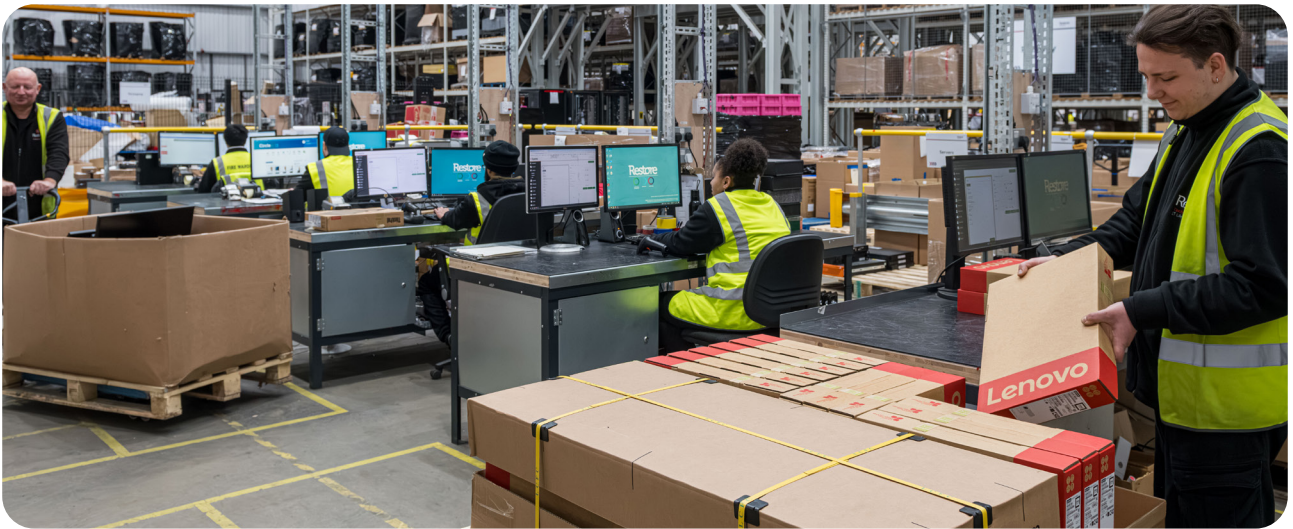

Our approach is built around a single, secure, and scalable process that ensures every asset is handled consistently and responsibly, regardless of its stage in the lifecycle.

With Restore Technology, you benefit from:

- > A single partner managing your IT assets from start to finish
- > A secure and fully audited process that minimises risk
- > Nationwide coverage, with the ability to scale with you
- > Secure and reliable data sanitisation and destruction
- > Real-time visibility and control of every asset across your IT estate

Our services are designed to flex with your priorities – whether you need help at a single stage or a complete lifecycle solution. Our experienced teams are there to help optimise every device and maximise value, while keeping each asset secure throughout the process.

## Solutions at scale

Restore Technology's fully managed services integrate seamlessly with your IT team. We work collaboratively to streamline your operations and reduce the risk to your data. That means no matter what stage of the IT lifecycle you're looking to improve, we have the expertise and infrastructure to make a difference.

**Our core services include:**

### IT Asset Disposition (ITAD)

At the end of your asset's useful life, our dedicated IT Asset Disposition team will assess and advise on the right channel to maximise its value: redeployment, sustainable recycling, or secure destruction. Our robust process is designed to meet stringent compliance reporting, so you can trust that every asset will be handled safely and securely, giving you complete peace of mind that your data privacy is fully protected.

### Device Lifecycle Management

We support organisations in managing their IT devices from deployment, through to secure end-of-life disposal. This ensures assets remain secure, cost-effective and compliant throughout their useful lifecycle – even when employees are joining, moving, or occasionally leaving your business. All while remaining environmentally conscious, showing transparent processes to support ESG aspirations in your firm.

### Deployment and Engineering

Our teams can provide setup, installation and configuration of devices and systems. This ensures that they're implemented efficiently and correctly from the start, freeing up your in-house teams to focus on their priorities. This includes managing relocation and seasonal demand, even storing your devices when they're not needed. The result is a seamless process that makes the most out of every device.

### Secure Destruction

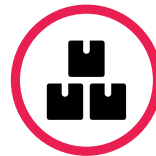

Our specialist division provides secure data destruction services, either at your workplace or at our government-approved facilities. Delivered by a highly experienced team, we ensure compliant destruction to the highest Government Security Classifications under NPSA and NCSC certification. Our bespoke destruction vehicles can shred media down to 2mm, enabling us to operate securely even in the most sensitive environments.

## We can also support with:

### Secure storage and logistics

We provide secure storage and efficient logistics to ensure each asset stays safe, even when it's on the move.

### Asset tracking and inventory management

We offer comprehensive asset tracking and inventory management to monitor, organise, and maintain your estate.

### Device relocation

Our team moves devices safely and securely between your sites, getting machines on the right desks at the right time.

### Detailed reporting and audit documentation

We maintain transparency across all our processes, providing detailed reports and audits to meet your needs.

# Why work with us?

With over 27 years of industry experience, we bring extensive knowledge and a mature operation to every project – whether it spans a day or a decade. Our dedicated teams are trained to give you a service that is...

## Secure

Security isn't a feature of our process: it's at the centre of what we do. Our services will give you complete confidence and the highest level of assurance in how your assets and data are handled through:

- > Government approved facilities, including Police Approved Secure Facility (PASF) status
- > The highest industry accreditations including NCSC CAS-S, NSPA, and JOSCAR
- > Specialists cleared to official government security level – capable of operating in highly sensitive and regulated environments
- > Mandatory security checks for all Restore Technology employees
- > Fully controlled, transparent, and auditable process
- > Verified chain of custody for all assets
- > Data destruction certificates for all devices

## Reporting

Stay informed and in control throughout the lifecycle of your assets with secure, real-time access to reporting and compliance documentation through the Restore Client Portal, including:

- > Secure login to the Restore Client Portal
- > Centralised access to all your assets and data records in one place
- > Real-time monitoring of asset progress and status
- > Downloadable reports and data destruction certificates
- > Access to Restore assurance documentation and industry accreditations

## Sustainable

Sustainability is more than just an intention – in our business and in yours too. As a responsible supplier, we maintain:

- > A circular IT lifecycle approach that maximises the residual value in your assets and minimises environment impact
- > Zero-to-landfill disposal and ESG aligned processes
- > A lifecycle strategy that supports your sustainability goals
- > Certificates and evidence to support your ESG audit trails

## Scalable

As your business changes, so do your needs. Our versatile approach ensures we can respond quickly, while remaining consistent as you scale. We support this with:

- > Over 14,000m<sup>2</sup> of secure warehousing infrastructure
- > A fleet of seven bespoke destruction vehicles, operating out of three UK sites
- > A nationwide network resulting in rapid response time
- > Scalable teams, able to flex with your demand
- > The ability to process a high volume of assets, both on and off-site

## How we solve your challenges

Working with Restore Technology is a path to solving your everyday IT challenges, supported by a team that understand the day-to-day realities of managing a mixed estate. We can help you with:

Your challenge	Our solution	What it means
Managing a geographically disperse IT estate.	Fully documented and auditable tracking of every device, supported by a robust chain-of-custody and transparent reporting.	Complete visibility and control of each device – meaning you can make informed decisions to optimise your business.
Finding the space to securely store devices.	14,000m <sup>2</sup> of secure warehousing combined with advanced asset tracking and real-time visibility.	Secure storage and more efficiency through scalable handling and supplementation of in-house teams.
Getting the most out of ageing assets.	End-to-end ITAD services, including redeployment, resale and recycling, with secure data sanitisation or destruction options.	Full compliance and assurance while maximising asset value and return on investment.
Having the capacity to manage your estate as you grow.	Skilled and flexible teams capable of scaling to suit your needs.	No underutilised staff, or urgent recruitment, leaving IT teams free to focus on priorities for the business.
Managing employees joining, leaving, or moving locations.	Capability to store, manager, configure, deploy and collect your new and existing IT assets	A fully managed asset portfolio solution that supports the workforce changes efficiently and securely.

We adjust our services to align with the problems you face every day – so we can turn IT lifecycle management into a strategy that supports your business goals.
